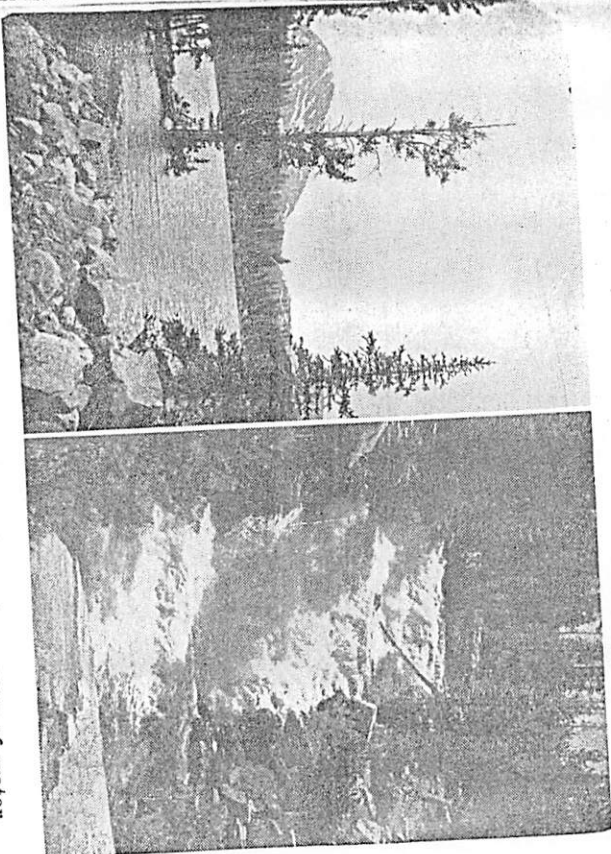
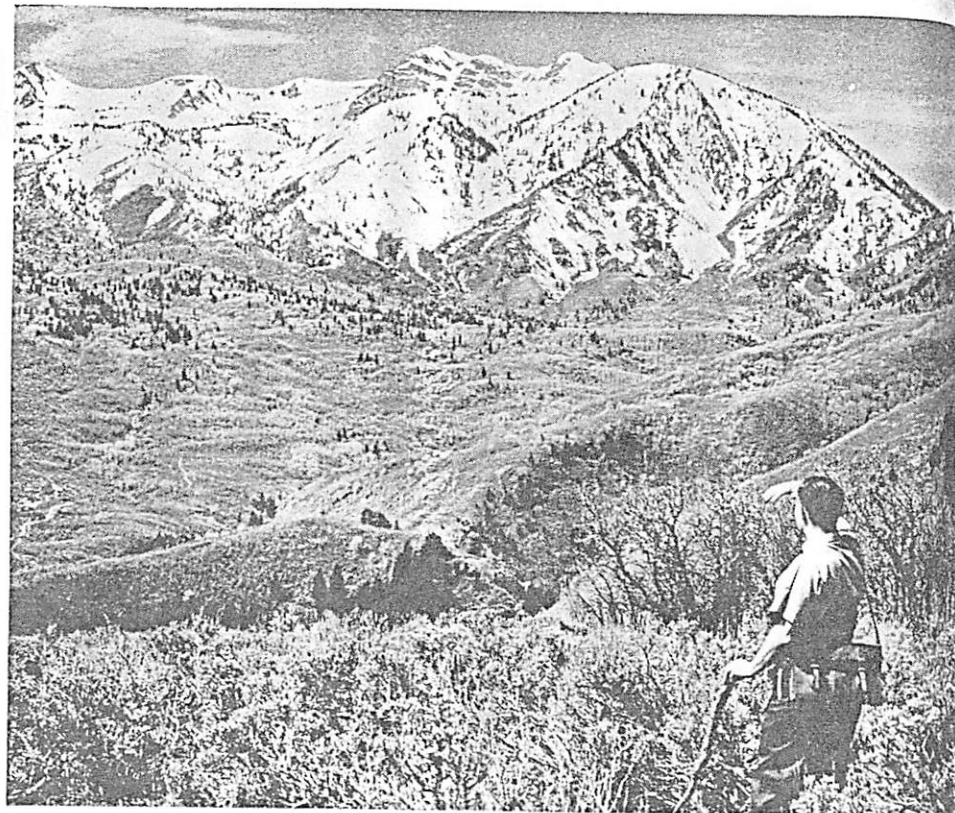
Utah's ten National Forests with a total acreage of eight million acres were wisely selected and are well kept to protect this marvelous heritage of the people. This is part of the Uintah range of mountains which is one of the few ranges in the world running east and west.


Utah's lakes and it's streams furnish the natural resource of water to guarantee a rapidly expanding population.

Head of Provo River

Along the Road
— Geo A Fisher


Everywhere in Utah is the majesty of the Mountains Part of the Rocky Mountain System and known locally as the Wasatch Range running north and south through the State.

And everywhere in Utah is the stillness and the grandeur of the Forest.

ond feet. Looking to the future, Heber recently completed a new 10-inch well which is expected to produce an additional three second feet of water flow. Water rates are presently among the lowest in the state. Resident maximum rate per month, including three hours daily sprinkling time, is $1.30.

The U.S. Bureau of Reclamation diagram appearing on page 23 shows projected development of Heber area water resources as they fit into the far reaching Central Utah Project. (For chemical analysis of water see Appendix.)

Shaded road through the "Quakers" on one of the area's many scenic drives. Summer, Fall colors are unexcelled

TOURISM AND RECREATION

Certainly, one of the greatest potentials of the Heber area lies in further development of tourism and recreation. Wasatch County is richly endowed with natural beauty. With additional development of facilities, it can become a perfect setting for year-around recreational enjoyment. Included are an abundance of wooded canyons, spring-fed streams, lakes and man-made reservoirs.

Wallace Stegnar reporting on an autumn visit to the area in Vogue Magazine entitled "My Love Affair with Heber Valley," was of the opinion that "...the Wasatch takes second to no place in America, even Vermont, in the splendor of its colors."
